Benefits of Environmental Management

An Environmental Management System is an organized system for businesses to manage their environmental impacts, open up to new customers and markets and grow their business.

BENEFITS OF ENVIRONMENTAL ASSESSMENT & MONITORING

- Lower cost and time of project implementation
- Cost-saving modifications in project design
- Increased project acceptance and performance
- Avoided impacts and violations of environmental laws and regulations
- Avoided environmental remediation/clean up costs

From pioneering remediation projects to environmental management solutions, we leverage knowledge and expertise to share best practices to add value to client organizations and reduce their risk on projects.

**Specialized Services**

Our environmental experts can assist with standard environmental audits, as well as more specialized requests in areas such as habitat assessment, flora and fauna assessment, GIS, risk assessment and information management.

From road extension projects to new building construction and infrastructure, we work tirelessly to help your project meet or exceed regulator requirements, community needs, and public expectations.

**Health Concern & Investigations**

We use in-depth investigation techniques to verify whether a particular source of pollution has caused indoor air quality problems for our client and/or multifactorial issues.

The nature and source of particular indoor air contaminant will depend on the intrinsic hazard of the pollutant and the level of exposure to that pollutant.

**Environmental Consultant – Mitesh Kumar**

Experienced Environmental Consultant with over 10 years experience in supervising site characterization and detailed site assessment (Phase I and Phase II ESA) including groundwater modeling, risk assessment, and implementing remediation options in diversified industries including Construction, Engineering, Oil and Gas and Manufacturing Organizations.
